

Installation Translation Manager

Installation Translation Manager.....	1
Installation	1
Access to public files.....	1
Activation	1
Database	1
Roles&Policies	2
Workflow	2
Trigger	3
Cronjob.....	4
Cache	4
Configuration	4

Requirements

- PHP 5.3
- eZ Publish 4.x
- MySQL

Limitations

The translation of template based strings that are commonly stored in .ts files will not work within a cluster environment properly, since eZ Publish has no cluster enabled API for this functionality. In that case you will need to do the translation of the .ts on one cluster node and distribute the newly created .ts files over to the other nodes of the cluster.

Installation

- Download the package
- Unpack the package to your extension folder

Access to public files

Add the following “Rewrite Rule” to your Apache / IIS setup

```
Rewriterule ^extension/[^/]+/schemas/. * - [L]
```

Note:

The schemas are needed to deliver XML validation and parsing within the CAT solution.

Activation

- edit your site.ini.append.php in your admin siteaccess settings and add this line to the “[ExtensionSettings]” block : “ActiveExtensions[]=translationmanagement”
- also run the bin/php/ezpgenerateautoloads.php -e script to update your classes

Database

- Inject extension/translationmanagement/sql/mysql/mysql.sql into your database.

Roles&Policies

- Create Roles
 - Checker with policies
 - TM->Approve
 - Collaboration
 - Translator with policies
 - TM->Translate
 - Collaboration
- Add the certain roles to the user (you can select also only a certain language for a certain user)
- If you have many translator/checker then u also can use user groups (add the node of this root group to the translation.ini.append.php)

Assigned roles [16]		
Name	Limitation	
 Translator Common	Subtree (/1/2/)	
 Translator Common	Subtree (/1/43/)	
 Backend User	No limitation	
 Translation Memory Upload	No limitation	
 Guests/Partners (Base settings)	No limitation	
 Editor	Subtree (/1/2/59/997/)	
 Editor ←	Subtree (/1/2/100/533/817/)	
 Editor	Subtree (/1/2/63/)	
 Translation checker ita	No limitation	
 Translation checker eng ←	No limitation	
 Translate ita	No limitation	
 Translate eng ←	No limitation	
 Newsletter Editor	No limitation	
 Backend User	No limitation	
 Backend User	No limitation	
 Partner Manager	No limitation	

Workflow

- Create the Workflows
 - Create a new workflow "Translation content object before publish" with following events:
 - Event/Translation Management
 - Event/Translation Collection
 - Create a new workflow "Subworkflow Translation Manager" with following events:
 - Event/Multiplexer, Workflow to run: "Translation content object before publish"
 - Also configure sections, classes, language for this workflow
 - Create a new workflow "Translation module view collect" with following events:

- Event/Translation Collection

The screenshot shows the eZ Publish 4.0.0 Setup page. The 'Setup' tab is selected in the top navigation bar. On the left, the 'Setup' menu is visible, with 'Workflows' highlighted. The main content area displays the 'Standard [Workflow group]' configuration. It shows the ID as 1 and the Name as 'Standard'. Below this, there is a table of workflows:

Name	ID	Modifier	Modified
After publish	5		10/18/2006 05:02 am
Before publish	2		03/05/2008 07:37 am
Main before read	7		08/23/2007 01:45 pm
Newsletter Subworkflow	4		10/18/2006 04:56 am
Translation Management Collection	3		06/30/2006 02:38 am
Translation Management Sub-Workflow	1		06/30/2006 02:38 am
Translation module view collect	13		07/09/2008 02:53 pm

Buttons for 'Edit', 'Remove', 'Remove selected', and 'New workflow' are present. The right sidebar shows the 'Current user' section with links for 'Change information', 'Change password', and 'Logout'. There are also sections for 'Bookmarks', 'Clear cache', and 'Quick settings'.

Trigger

- Create a trigger to connect the workflow:
 - tm translate before -> Translation module view collect
 - content publish before -> Subworkflow Translation Manager

The screenshot shows the eZ Publish 4.0.0 Setup page, specifically the 'Workflow triggers' section. The 'Setup' tab is selected. On the left, the 'Setup' menu is visible, with 'Triggers' highlighted. The main content area displays a table of workflow triggers:

Module	Function	Connection type	Workflow
content	publish	before	Subworkflow Translation Manager
content	publish	after	No workflow
shop	confirmorder	before	No workflow
shop	checkout	before	No workflow
shop	checkout	after	No workflow
shop	addtobasket	before	No workflow
shop	addtobasket	after	No workflow
shop	updatebasket	before	No workflow
shop	updatebasket	after	No workflow
content	read	before	Main before read
content	read	after	No workflow
tm	translate	before	Translation Management Collection
tm	translate	after	No workflow

An 'Apply changes' button is located at the bottom of the table. The right sidebar shows the 'Current user' section with links for 'Change information', 'Change password', and 'Logout'. There are also sections for 'Bookmarks', 'Clear cache', and 'Quick settings'.

Cronjob

- Make sure the cronjob scripts "workflow" and "notification" will execute on a regular basis else the translation workflow will never start. You can run the cronjob manually with "commandline> php runcronjobs.php frequent".

Cache

- Delete the cache

Configuration

- My account -> My notification settings -> fill out checkbox "translation" (to receive mails)

eZ Publish version 4.0.0
